5	Name	Role	Position	Responsiblity
1	LOCH THIDA	Project Management	Project Manager	- Act as the main contact for MNO Bank and manage expectations - Control scope, budget, and change approvals - Decide how to respond to risks and trade-offs - Report project status to the bank and senior management - Lead handover, hypercare, and final sign-off
2	THY DAYUTH	Business Analysis	Lead Business Analyst	- Run requirements workshops with the bank's security, IT, and compliance teams - Turn the brief's functions into clear, testable requirements - Keep the traceability matrix linking requirements to design and tests - Resolve conflicting requirements between bank departments
3	MAO SOPHANIT		Compliance & Risk Analyst	- Identify compliance reporting needs (central bank, PCI DSS, ISO 27001) - Define the log retention policy and retention periods - Specify the audit evidence the SIEM must produce - Flag compliance risks in the design
4	NE SOVATHANA	Security Engineer	SIEM Solution Architect	- Produce the Proposed Solution and overall architecture - Select the SIEM platform and size storage for expected log volume - Design high availability and secure log retention - Make sure the design covers all functions in the brief
5	MET SOKHCHEAT		SIEM Platform Engineer	- Deploy and harden the SIEM platform - Set up storage, retention, and access control - Make historical log search fast and reliable - Support the Log Integration Engineer during onboarding
6	NY MEANEAT		Log Integration Engineer	- Onboard all log sources: firewalls, network devices, servers, Active Directory, applications, and endpoints - Configure collectors and forwarders - Parse and normalize logs into a consistent format - Confirm each source is sending complete logs
7	LIM HUYCHENG		Detection & Dashboard Engineer	- Build correlation rules to detect threats in real time - Configure alerts and notifications - Create dashboards, reports, and investigation views - Tune rules to reduce false positives
8	LY KEOSOVANN		QA / Test Engineer	- Write the test plan and acceptance criteria - Check log completeness and alert accuracy - Run simulated attacks to confirm detection works - Test performance and retention, and support UAT with the bank
9	LOUNG SOTHUNVORN	Cost & Commercial	Cost Analyst	- Estimate licence, hardware or cloud, labour, and support costs - Model costs against log volume and retention period - Work with the Architect so sizing and cost match
10	KUNTHEA SOCHETRA		Commercial & Contracts Lead	- Prepare the pricing proposal for the bank - Define SLAs, payment milestones, and warranty terms - Document assumptions and exclusions - Review contractual risks
11	LY KIMHONG	Planning & Governanc	Project Planner	- Build the WBS and Gantt chart - Plan resources and identify the critical path - Track progress and flag delays early - Re-plan after changes and cover for the PM as deputy
12	MAO SOVANRATHANA		Governance & Quality Lead	- Maintain the risk register and issue log - Run change control for scope changes - Set documentation standards and check quality - Prepare training materials and runbooks for the bank's analysts

Why these 5 roles?	They cover everything needed to deliver the SIEM for MNO Bank: project management, requirements and compliance, technical delivery, costing and pricing, and planning and governance.
Why does each role have a different number of members?	It follows workload and complexity. Security Engineering has 5 because the SIEM needs several specialist skills (design, deployment, log onboarding, detection, testing). Three teams have 2 because each covers two distinct tasks. Project Management has 1 because one person must hold overall accountability.
Why is each member assigned to that role?	Each member's skills match the deliverables of their role, so every task has one clear owner and every role links back to the bank's requirements.
