

Class Activity - Identify Running Processes (DAYUTH THY)

Objectives

In this lab, you will use TCP/UDP Endpoint Viewer, a tool in Sysinternals Suite, to identify any running processes on your computer.

Part 1: Download Windows Sysinternals Suite.

Part 2: Start TCP/UDP Endpoint Viewer.

Part 3: Explore the running processes.

Part 4: Explore a user-started process.

Background / Scenario

In this lab, you will explore processes. Processes are programs or applications in execution. You will explore the processes using Process Explorer in the Windows Sysinternals Suite. You will also start and observe a new process.

Required Resources

- 1 Windows PC with internet access

Instructions

Part 1: Download Windows Sysinternals Suite.

- a. Navigate to the following link to download Windows Sysinternals Suite:

<https://technet.microsoft.com/en-us/sysinternals/bb842062.aspx>

- b. After the download is completed, right+click the zip file, and choose **Extract All...**, to extract the files from the folder. Choose the default name and destination in the Downloads folder and click **Extract**.

- c. Exit the web browser.

Part 2: Start TCP/UDP Endpoint Viewer.

- Navigate to the SysinternalsSuite folder with all the extracted files.
- Open **Tcpview.exe**. Accept the Process Explorer License Agreement when prompted. Click **Yes** to allow this app to make changes to your device.
- Exit the File Explorer and close all the currently running applications.

The image shows two windows from a Windows operating system. The top window is TCPView, displaying a list of network connections. The bottom window is File Explorer, showing the contents of the SysinternalsSuite folder.

Part 3: Explore the running processes.

- TCPView lists the process that are currently on your Windows PC. At this time, only Windows processes are running.
- Double-click **lsass.exe**.
What is lsass.exe? In what folder is it located?

- Close the properties window for lsass.exe when done.
- View the properties for the other running processes.

Note: Not all processes can be queried for properties information.

Part 4: Explore a user-started process.

- Open a web browser, such as Microsoft Edge.

What did you observe in the TCPView window?

The screenshot displays the TCPView application window from Sysinternals, showing a list of network connections. The window title is "TCPView - Sysinternals: www.sysinternals.com". The menu bar includes File, Edit, View, Process, Connection, Options, and Help. The toolbar shows icons for refreshing, pausing, and filtering, along with filters for TCP v4, TCP v6, UDP v4, and UDP v6. A search bar is also present.

Summary statistics at the bottom of the TCPView window:

- Endpoints: 81
- Established: 57
- Listening: 18
- Time Wait: 6
- Close Wait:
- Update: 2 sec
- States: (All)

Below the TCPView window, a web browser (Microsoft Edge) is shown with a new tab open. The address bar contains "Search with Google or enter address". The browser's taskbar shows several open tabs: "New Tab", "cybersec", "Course", "Social", "AI", "Home | eLearning CADT", "ansible - Google Search", and "CADT - Google Drive".

Class Activity - Identify Running Processes (DAYUTH THY)

- b. Close the web browser.

What did you observe in the TCPView window?

Process Name	PID	Protocol	State	Local Address	Local Port	Remote Address	Remote Port	Time
[Time Wait]		TCP	Time Wait	192.168.0.167	56880	172.217.25.78	443	
[Time Wait]		TCP	Time Wait	192.168.0.167	52197	172.217.27.14	443	
firefox.exe	6240	TCP	Established	127.0.0.1	15222	127.0.0.1	15223	1/25/
